Errors

*

Test 'login with wrong email format credentials read data from fixture' in 'login.test.ts' finished with failure, it is not correct, negative tests also must passed with success, we need to fix expected text of login error message, it must be 'Invalid email address.' instead of existing 'Invalid email addressssss.'

*

Script 'npm run report' in 'package.json' opens html report with empty values, command is not correct. Script 'npm run allure:generate' generates correct report, but not open it, it may be useful to add another script for open report instead of open it manually from folder.

*

Incorrect url in 'myAccount.test.ts' beforeEach section - https://google.com, line with correct path is commented.

*

There is only example test in 'myAccount.test.ts'.

*

Wrong value of password in 'users.json': 'test@12345' instead of 'Test@1234' as that is in 'valid_credentials' key.

*

Screenshot in Readme.md (16.66% passed) not correspond with that is on gh-pages, url https://azanir.github.io/cypressAllure/ (83.33% passed)

Improvements

*

Asserts are placed in page files instead of test files.

*

Change "Username" and "Password" - this line in Readme.md is useless, project installed successfully without this changes.

*

Add to Readme.md how to generate and open allure report, as there are scripts in 'package.json'.

*

Title of some commits not informative.
